# LOCKERS //

**MORE THAN JUST STORAGE**  
Why compromise  
between form and function?

# Providing essential storage in any environment

Storage systems by their very nature have a significant visual impact on any environment.

That is why it is essential for a truly design led office environment to choose a storage system where both design and functionality are taken to new levels of excellence.

## OFFICE STORAGE IN DESIGN

Poorly designed or uninspiring workspaces can affect stress levels, reduce productivity, impact on overall performance, and impede efforts to attract the best people.

Office storage products have always been an essential component in office furniture design, typically on a strictly functional level and hidden out of sight. Recent changes in market forces have meant that office storage is increasingly being integrated into the heart of office design. This in turn has led to a dramatic transformation in the market for lockers, epitomising how a well-designed functional product can seriously impact on the overall aesthetics of the modern office.

As key players in the office furniture market respond by launching new locker ranges in a variety of sizes and colours, it is perhaps more appropriate to consider the elevated importance of lockers from a bespoke design perspective.

When it comes to integrating storage lockers into an office fit-out project, functional considerations include; height, capacity, security, mobility, personalisation and power source. Additionally, lockers can be used to; enhance branding, inject colour, create zones and enhance workplace aesthetics.

As the trend for lockers to be customised is explored even further by end users, it is important to seek cost effective ways to add value for clients by presenting them with inspiring and unique design ideas that meet their storage needs without breaking the bank. Combining different materials and finishes, and injecting vibrant colours and graphics are good ways to exploit design principles to get the desired results.

Once you have ascertained the requirements for the project, choosing materials will largely be based on their functionality, choice of colours, and cost.

# BETTER BY DESIGN //

## Lockers can provide essential storage in any environment

Our production facilities allow for the seamless and efficient manufacture of MFC and steel furniture products. Lockers can be manufactured in either of these materials, and also by combining both. There are no limitations to the size of individual lockers in each bank, or to the scale of each project.

WE CAN DESIGN AROUND ANY DIMENSIONS, INTERNAL OR EXTERNAL.

## Combined Lockers & Storage

Small or unusually shaped spaces can leave few options for storage. Our bespoke design and manufacture capabilities make use of the full potential, no matter what the space.

## Branding Opportunities

Whether lockers are being used in a school, showroom, or workplace, they provide an excellent opportunity to incorporate corporate colours and branding into the environment.

## Purpose built to fit your requirements

Do you need private or public storage? A small bank of lockers or storage for a staff of several hundred?

## Versatile & Functional

Our in-house production capabilities, mean that you can incorporate lockers into any part of the office. Fitting lockers as an integral part of the office storage space works well when a seamless and tidy finish is necessary. Show us the space and we will design a perfect solution.

## Locker Finishes

We manufacture from mild steel with a variety of powder coating colours. Steel lockers can be made clad or mesh. We also offer 18mm MFC & compact laminate lockers with a diverse choice of finishes which include wood grains, white, grey and black.

# LOCKS //

We can supply a range of security including key, combination, digital and RFID options to fully integrate with your building security. Standard units are supplied with key locks each with two folding keys - locks can be suited and master keys supplied. Alternatively we have options for keyless and agile locking, doors can even be non-locking. Pull knobs, push to release and finger pulls are also available.

## Häfele Dead bolt rim lock, with fixed plate cylinder

Versatile & secure, standard key lock, Nickel plated Zinc alloy lock case, 6 plate lever locking system with 2,600 different key combinations possible.

## Gemini 3700

Small easy to use combination lock that is available in either digital or mechanical form. It has a small footprint and option of vertical or horizontal orientation and is available both flush and surface mounted and in a choice of standard or custom colours. Unique to all our digital code locks, you can use our steel override key to bypass the keyless locking feature when immediate supervisory access is necessary.

## Lehmann dial lock 59

The perfect solution for keyless-access or if a high number of possible combinations is required. Nearly unlimited locking combinations and choose your personal code.

- Four digit dials for high security
- Integrated scramble feature which automatically resets the dials during opening and closing
- Emergency opening feature
- High flexibility as your individual code can be freely programmed
- No administrative burden of key management

## Ganter GAT ECO.Lock

Easy-to-use, easy-to-retrofit electronic lock. By simply presenting an employee-ID card on the lock button, the lock is securely opened and closed via motorized bolt locking. To ensure easy, intuitive use, a multi-colored LED light clearly shows the current locking status – green for available and red for closed. Operates with all RFID/NFC credentials (mobile phone, card, wristband, key tag).

# HINGE // Hettich Sensys 110° with integrated Silent System

- Opening angle 110°
- Concealed hinge with clip on installation and integrated Silent System
- Height adjustment at mounting plate
- Hinge cup & arm material: steel, nickel plated
- Soft Close

# MFC FINISHES//

We use 18mm Melamine-faced boards which offer multiple possibilities for use in furniture and interior design thanks to their scratch resistance, abrasion resistance

and resistance to chemicals, Boards are manufactured from a mix of 30% recycled product, 45% cross-cuts, sawdust and shavings and the remainder sourced from

sustainably managed forests. Further information can be found at [www.egger.com](http://www.egger.com)

**Ellmau Beech** H1582

Ellmau Beech is one of the classics among woodgrain decors and is ideal for many applications. The texture ST15 Smoothtouch Velvet is also classically neutral with a very easy-care character.

**Vicenza Oak** H3157

Vicenza Oak offers an alternative to existing classical oaks. An elegant version of a rift cut oak with a striking woodgrain structure, its subtle color play and light gray undertones give the decor a very modern appearance.

**Maple** H1521

This reserved character is good for applications that show a lot of wood but where it should look rather neutral. It allows for universal combinations with colours and materials.

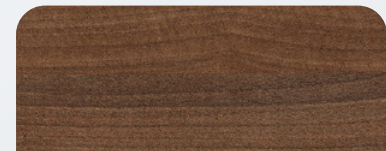

**Light Sorano Oak** H1334

Light Sorano Oak is a timeless oak that finds itself in every style due to an elegant linearity combined with natural radiance. Combinations with neutral to intense uni colours are also possible.

**Lancaster Oak** H3368

Natural Lancaster Oak is a fine-grained oak with fine natural elements. With its honey-brown colour it is warm and lively and works well in a country house style.

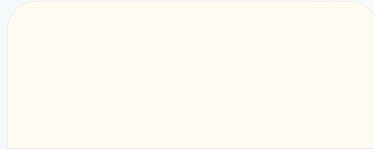

**Tobacco Walnut** H3702

A modern walnut which responds to the trend for more naturalness, even with classic elegant wood types, through dark inclusions and soft knots.

**Shorewood** H3090

Shorewood is a teak, however it can be used as a modern-exotic with many variants. The gray-brown color tone gives the lively linear woodgrain pattern a faded character.

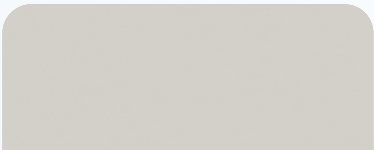

**Platinum White** W980

Platinum White can be used in many different combinations and in all areas of furniture and interior design. The texture ST2 Smoothtouch Pearl changes this neutral white to a brilliant white and makes it robust enough for all uses.

**Black** U999

Black is once again experiencing a comeback. It is used Scandinavian designs in black-white contrasts, but also as a contrast to light or even white woodgrain decor.

**Light Grey** U708

Light Grey can be combined in many different ways. Tone on tone combinations with other grey decors are possible, as well as contrasting with natural woodgrains.

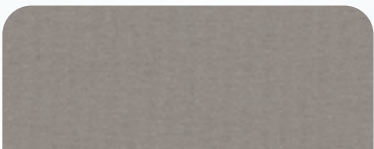

**Monument Grey** U780

The new grey tone Monument Grey has an exciting blue component, which is perfect for combinations with elegant, dark blue tones or blue-grey wood types.

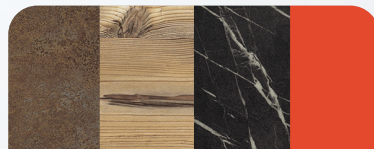

**Graphite** U961

Lighter than the pure U999 Black, graphite grey can create contrasts that are somewhat softer. This "Nearly Black" colour tone is suitable for large surfaces.

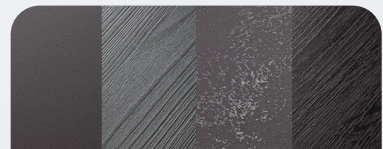

**Aluminium** F501

The decor Brushed Aluminium displays, in contrast with classic aluminium, a fine sanding pattern and also looks somewhat warmer and more exclusive, particularly in combination with warm wood types.

**Full Decor Selection**

We supply all Egger finishes including wood, metal and stone effects and a full range of unicolour finishes. Please be aware that different finishes may lead to increased cost and lead time.

**Textures & Surfaces**

The feel of a surface is important so we supply high end matt or gloss, realistic woodgrain and authentic stone and metal reproductions. Please be aware that different textures may lead to increased cost and lead time.

Custom Colours

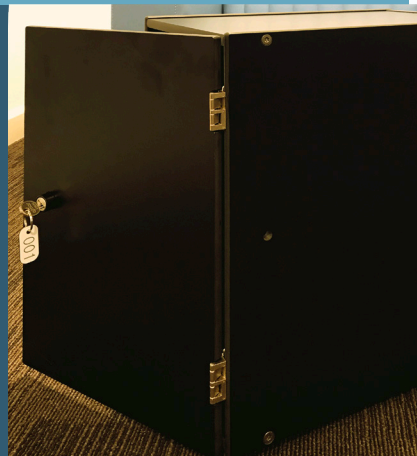

Steel lockers are made from a powder coated 1mm mild steel, double skin construction with optional single or double skin doors, a riveted carcass provides a robust sturdy locker. All units fitted with levelling feet and Hettich soft close hinges. A complete made to order size range is available with a range of internal finishes from shelves and drawers to garment rails and post slots.

Benches are available for locker room functionality, floor fixed 50mm heavy duty box frame with either slats, solid panels or even living edge timber. The seat raises the locker 400mm off the floor and 300mm deep, again these can be made to suit your specific requirements.

## Compact Laminate

Compact laminate has an attractive design and outstanding product characteristics. The extreme durability and moisture resistance make it the ideal material for indoor applications with high impact and increased demand for hygiene and cleanliness, such as in kitchens, bathrooms, sanitary rooms, hospitals, or restaurants.

## Graphical Solutions

We can also apply large format graphics to almost any surface to truly customise your work environment. Graphics offer limitless opportunities to transform a corporate environment with strong branding or themed colour.

## ISO Accreditation Success //

We retained ISO 9001, ISO 14001 and OHSAS 18001 accreditation at the beginning of 2019. All standards are UKAS accredited. This gives our customers the assurance they need that the relevant processes and systems are in place with respect to quality, the environment and health and safety, ensuring that the management systems will continue to improve working practices. With more efficient processes and systems having been adopted, customer satisfaction has improved and staff feel fully supported. We respect the environment and are committed to proving that we are aware of our environmental obligations.

OHSAS (Occupational Health and Safety Advisory Services) 18001 is a UK standard that instils confidence in our customers regarding Health & Safety issues.

# ASK THE EXPERTS //

COMMISSIONING YOUR IDEAL STORAGE SOLUTION NEED NOT BE A DAUNTING TASK

An experienced consultant will visit you to understand your specific needs, what you need to achieve, the type of product you require and also to survey the relevant area.

## STEP ONE

Our consultants will then liaise with our team of dedicated designers to ensure that your brief is effectively communicated and accurately translated.

## STEP TWO

Our consultant will now present our concept to ensure that we have accurately translated the brief and to take on board any tweaks, amendments or suggestions.

## STEP THREE

## ENVIRONMENTAL COMMITMENT //

SUSTAINABLE DEVELOPMENT HAS ALWAYS BEEN AN INTEGRAL PART OF OUR DESIGN PROCESS.

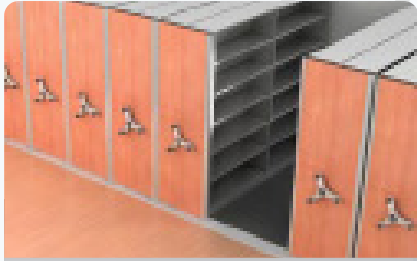

We are committed to creating a better environment through:

- The strategic planning of our business
- By continually reviewing and improving our activities, products and services.

## Sourcing of materials

Wherever possible we aim to manufacture products using recyclable materials and/or materials which have a valid chain of custody certification.

With our unique, no obligation six step design service we will guide you seamlessly and effortlessly from concept to installation.

Our designers can create 3D photo-real imagery of our concepts, bridging the gap from concept to creation and aiding any internal approvals which may need to be gained.

## STEP FOUR

Our experience and commitment ensures unparalleled levels of service and attention to detail from our initial consultation to the

Our team of engineers will now turn your concept into reality, using traditional skills and the latest technology to ensure the highest levels of quality.

## STEP FIVE

complete installation. Whatever level of service you require and whatever scale the project, we are on hand to guide you through every step.

Our experienced teams will now install the finished product, taking care to ensure that the whole process is as seamless and hassle free as possible.

## STEP SIX

### Efficient production & installation

We strive to minimise all energy usage wherever possible and constantly review all of our practices to reduce, reuse and recycle our waste wherever possible.

Our manufacturing complies with iso14001: 2004. We utilise minimal packaging for minimal wastage. All pallets are returned to the factory for re-use. Waste steel is recycled. Wood off-cuts are used in our certified carbon neutral wood burner.

### Greater longevity

Modular designs minimise wastage, provide cost-effective solutions and facilitate the refurbishment and maintenance of our products. Wherever possible we ensure that our products are fully relocatable.

### Cradle to the grave

All of our mobile storage solutions are manufactured from recyclable materials wherever possible.
